Senior Systems Analyst

Description

Our Public Sector Client requires a **Senior Java Systems Analyst to support the InfoDec Modernization Project by developing an interconnected suite of systems.**

The InfoDec Modernization project aims to modernize business processes and reduce manual data capture to enhance online services.

Responsibilities to include:

- Perform developments using backend Java technology such as J2EE, EJBs, Eclipse, Maven, and more
- Review system documents from architects and make new developments as required
- Review code developed and perform unit and integration testing
- Document constraints and assumptions for each user story based on business requirements
- Assist in the management of releases following Agile Methodology

Must Haves:

- 10+ years as a Systems Analyst using **Java**
- 5+ years working with **EJBs, Eclipse, WebLogic, DevOps, and Maven**

Nice to Haves:

- Agile certification
- 3+ years of Angular experience
- University Degree or College Diploma in Computer Science or Computer Engineering
